Maintenance Costs vs Downtime by Equipment

Sum of Maintainance_Cost_KES and Sum of Downtime_...

Maintenance Cost Over Time

Sum of Maintainance_Cost_KES by Maintainace_Date

KEY INSIGHTS

- E002(Dialysis Machine) Has the highest maintenance burden based on maintenance costs, downtime and repair requirements.
- Corrective maintenance has a higher maintenance burden than preventive maintenance accounting for KES 78,000 in cost and 71 hours of maintenance time compared with KES 48,000 and 21hours for preventive maintenance.
- 15 work orders were recorded with total maintenance cost of KES 126,000 ,92 downtime hours and 53 repair days.
- The maintenance cost and downtime analysis highlights equipment that "may require" closer monitoring and targeted maintenance planning.

RECOMMENDATION

- Priotize preventive maintenance for high-critically equipment to help reduce unexpected breakdowns and associated downtime.
- Investigate E002 further to identify the causes of its higher maintenance cost, downtime and repair measurements.
- Monitor repeat failure and recurring faults to identify equipment requiring corrective action or closer monitoring.
- Use maintenance trends to plan resources including technician time, spare parts and maintenance budgets.
- Review maintenance performance regularly using cost, downtime, repair time and work-order trends to support data-driven maintenance decisions.

DATA NOTE

This dashboard uses a synthetic medical equipment maintenance dataset created for analytical and portfolio purposes. The findings demonstrate how maintenance data can be analyze to identify cost, downtime, repair and maintenance trends.
